

PVA TePla AG: Disposal of the UV Systec business

(Asslar, July 31, 2008) – At the end of July, PVA TePla AG, Asslar, sold the business of its subsidiary UV Systec Gesellschaft für UV-Strahler und Systemtechnik mbH, Jena, to uv-technik Speziallampen GmbH, Wümbach. Both parties agreed to maintain confidentiality on the purchase price.

UV Systec, which specializes in environmentally-friendly UV-lamp technology for non-chemical disinfection of water, air and surfaces and which was allocated to the Vacuum Systems division at PVA TePla, only generated small contributions to sales in recent years and was not part of the core business at PVA TePla AG. The continuation of the business by uv-technik Speziallampen, a renowned expert for UV lamps, electronic control gears and UV measurement systems provides the best conditions for developing this interesting technology further on the market.
